DETAILED ACTION

Allowable Subject Matter

Claims 1-11 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: claims are allowable at least for the reason that the prior art does not teach or reasonably suggest the objective system, lens, method of manufacturing lens or method of manufacturing the optical system providing a lens system being such that the ratio of root mean square of the optical path difference's (OPD's) generated by the objective system or lens system at oblique beam entrance to the system satisfies the conditions:

$$\text{OPD (A51) } / \text{OPD (A31) } < 0.65,$$

$$\text{OPD (A51) } / \text{OPD (A31) } < 0.4,$$

within the field of the objective system (18), where OPD (A31) is the contribution of the third order Zernike coma to the root mean square wavefront aberration and OPD (A51) is the contribution of the fifth order Zernike coma to the root mean square wavefront aberration (as recited in the specification, OPD is defined on page 7 and with regards to the third and fifth order Zernike coma are recited in the specification on page 7 line 15 – page 8 line 8).

Oka et al. (5,726,436) teaches of an apparatus and method for compensating coma aberration and has a relationship in regards to a third-order and fifth order coma aberration, but Oka et al. lacks the ratio of root mean square of the optical path difference's (OPD's) generated by the objective system or lens system at oblique beam entrance to the system satisfies the conditions of the expressions above.

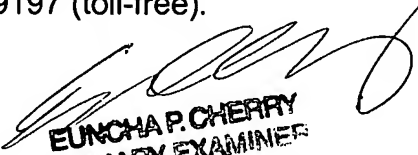

Opheij et al. (6,052,237) teaches an apparatus and its lens comprising a Zernike polynomial giving a focus correction appropriate for the spherical aberration, but Opheij lacks the ratio of root mean square of the optical path difference's (OPD's) generated by the objective system or lens system at oblique beam entrance to the system satisfies the conditions of the expressions above.
